

InDomo ACCESSIBLE MOBILITY

Why a home lift?

Our home lifts are designed to solve the needs of vertical mobility and to remove architectural barriers in all environments, both private and public.

They represent the ideal solution to overcome the stairs and rediscover the pleasure of moving freely in every moment of the day.

They can be installed both inside and outside the building in special metal structures or between the walls of the house.

They ensure a high level of ride comfort, great reliability and total safety, for example guaranteed by the automatic emergency lowering system in the event of a power failure.

They can be installed in new buildings but perfectly fit any existing environment, increasing their value.

Safety

Thanks to the wide range of specific devices you can move around the house everyday without worries.

Comfort

It can be operated by pressing the button, both in the cabin and on the landings. Choosing the version with automatic sliding or folding doors in the car, you will not have to hold the button pressed during the entire travel.

Stile

Decorate the space in motion by choosing the finishes that best suit your environments and satisfy your taste as you would do for any furnishing accessory. Our renewed range of cabins, Smart - Idea - Style and Opera, best represents the expression of MADE IN ITALY.

InDomo

Indoor and outdoor homelifts

InDomo can be installed both inside and outside the building to ensure maximum accessibility at all levels.

If you do not have a specific shaft you can connect the lift directly to the balcony or use existing windows, modified to obtain the necessary entrances.

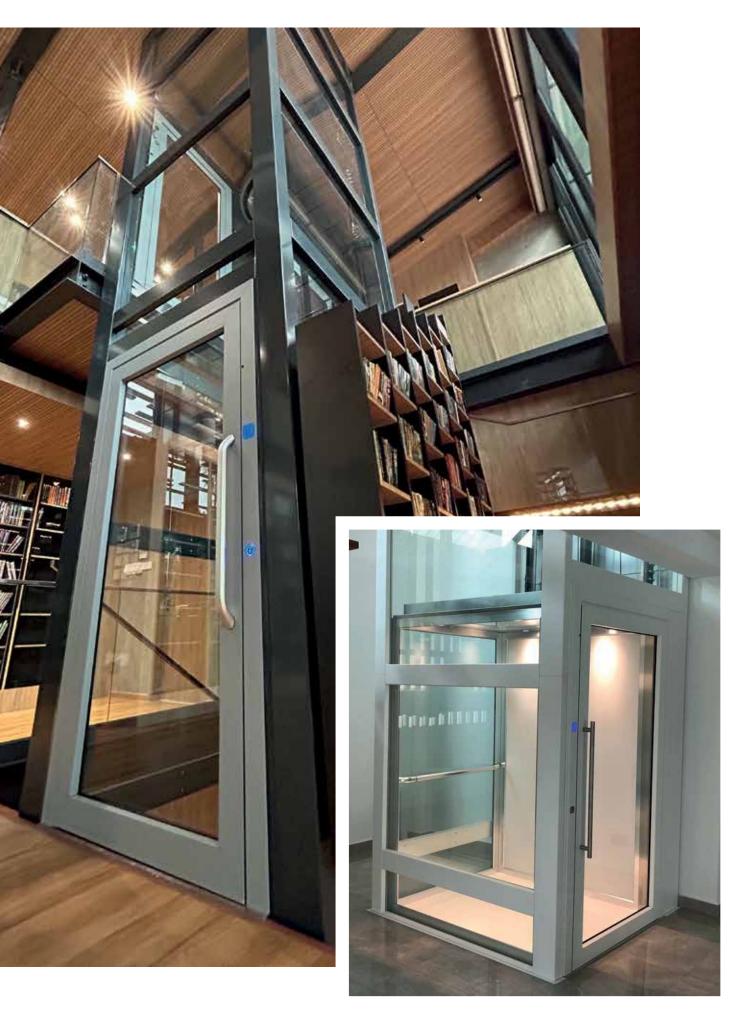

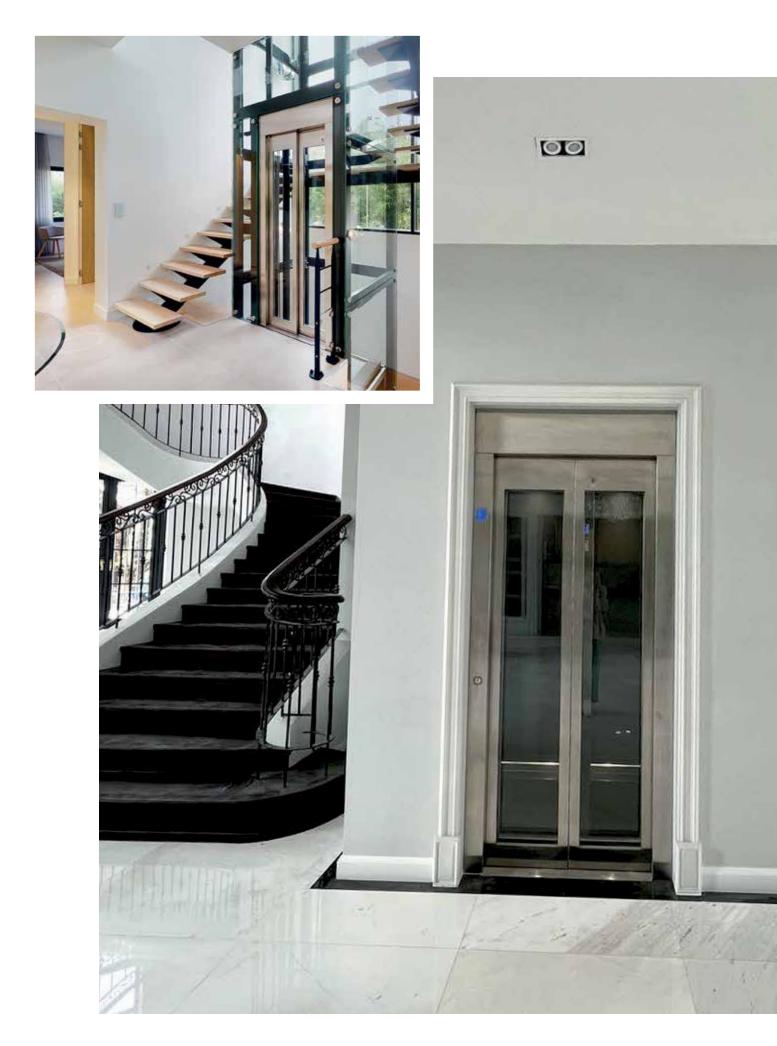

Small elevators for private homes and public environments

Our products find their natural connotation mainly in private homes to help you live fully your environments.

Nevertheless, they are the ideal solution to overcome architectural barriers in public environments like schools, shops, restaurants, offices, and can guarantee the right solution to all needs.

InDomo

Masonry shaft or metallic structure

The lift travels inside a shaft to guarantee the maximum safety, according to the existing regulations law. The shaft can be obtained inside the house making it in masonry or concrete.

Alternatively we can provide a metal structure designed for indoors or outdoors (since it is weather-proof), certified according to the anti-seismic rules. The structure has multiple finishes and can be completely glazed to ensure good aesthetic results, lightness and visibility.

Swing doors or automatic doors

As standard, InDomo lifting platforms are offered with swing glazed doors that guarantee maximum visibility and passive safety.

They can also be equipped with automatic sliding doors or with internal folding doors and external automatic swing doors (MyDomo) which allow automatic control to avoid having to keep the button pressed during the entire travel.

Cabin Smart

Beauty and simplicity

With its up to date, minimalist and yet affordable design, this is LiftingItalia best selling cabin, now available with new eye catching skinplate texture finishes.

Cabin Loea

Elegance and flexibility

Bright, fresh and available in a wide range of colors, this cabin boasts a plain and youthful design that brings sparkle to its surroundings. IDEA is the cabin designed specifically for panoramic lifts and offers the possibility of having up to three glass walls.

STRENGTH AND BEAUTY

BL: blind version

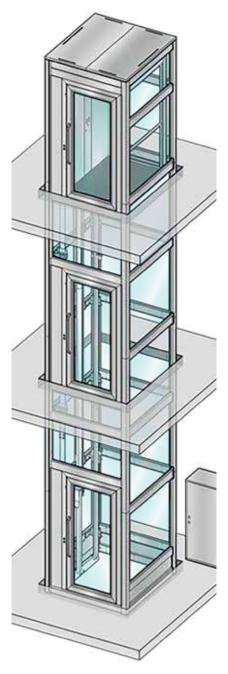

CROSS 50.2 2 is a steel structure for lift and lifting platform, suitable to be placed both inside and outside the building, consisting of bolted uprights and connecting crosspieces, bolted, prepared for fixing glasses or panels from inside the structure. The CROSS 50.2 structures are tested according to the NTC2008 standards for installations in seismic zones. It has clean lines that suit all environments, both outdoor and indoor. Thanks to this structure, expensive masonry work is no longer necessary except for landing on the floor in case it was not planned.

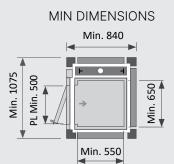

GL: glazed version
